

## Paglia Trinciata Forte

**Paglia Trinciata Forte** is a dust-extracted chopped straw product without binders or additives. Its high absorbency prevents the formation of odours and keeps the animals from getting dirty, thereby assuring their well-being.

A key feature of this product is its dependably consistent quality, which allows it to be safely used throughout the year. The product is prepared using only selected straw which is chopped, dust-extracted and separated from any foreign matter.

**Paglia Trinciata Forte** should be uniformly distributed over the entire bedding surface to form a mat. The Forte dust-extracted chopped straw is excellent as a bedding for livestock, but also has uses in agriculture, particularly for extensive strawberry cultivation for impoverishing the soil.

- Convenient and easy to transport
- High absorbent power
- Dust extracted
- Easy to use
- Product freely disposable under European legislation
- Packed in convenient bales of approx. 250 kg.
